Apply filters to SQL queries

Project description

This project is to demonstrate the basic use of SQL through filtering queries as a cyber security analyst. Snapshots from the finished project will be included in this document.

Retrieve after hours failed login attempts

I want to filter the table to show only failed login attempts beyond working hours. This would show the unusual activity, and the cyber security analyst can then take steps to prevent an incident. Below is the filter query that I used.

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE login_time > '18:00' AND success = 0;
```

After using the filter, the list of attempts was presented as shown below.

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE login_time > '18:00' AND success = 0;

```

Retrieve login attempts on specific dates

I want to check on specific dates for the failed login attempts.
Below is the filtered query I used.

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE login_date = '2022-05-08' OR login_date = '2022-05-09';
```

The result of the query showed a number over 112 attempts, which gives the idea of how many failed attempts can occur in a single day.

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE login_date = '2022-05-08' OR login_date = '2022-05-09';
+----------+----------+------------+------------+---------+-----------------+---------+

Retrieve login attempts outside of Mexico

Now I want to filter login attempts from outside of Mexico. Below is the filtered query.

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE country NOT LIKE 'Mex%';
```

Below is the result. The number far exceeded to 200.

```
MariaDB [organization]> SELECT * FROM log_in_attempts WHERE country NOT LIKE 'Mex%';

Retrieve employees in Marketing

Instead of querying for login attempts, I will filter for employees in a specific department. This is the query and the result.

```
MariaDB [organization]> SELECT * FROM employees WHERE department = 'Marketing' AND office LIKE 'East%';
+-------------+--------------+----------+------------+----------+
| employee_id | device_id    | username | department | office   |
+-------------+--------------+----------+------------+----------+
|        1000 | a320b137c219 | elarson  | Marketing  | East-170 |
|        1052 | a192b174c940 | jdarosa  | Marketing  | East-195 |
|        1075 | x573y883z772 | fbautist | Marketing  | East-267 |
|        1088 | k8651965m233 | rgosh    | Marketing  | East-157 |

```

Retrieve employees in Finance or Sales

This is another example of filtering employees through a specific department.

Below is the query that was used.

```
MariaDB [organization]> SELECT * FROM employees WHERE department IN ('Finance', 'Sales');
```

This is the result of the query.

```
MariaDB [organization]> SELECT * FROM employees WHERE department IN ('Finance', 'Sales');

Retrieve all employees not in IT

The final query is to filter employees who are not in the IT department.

Below is the query that was used.

```
MariaDB [organization]> SELECT * FROM employees WHERE department != 'Information Technology';
+-------------+-------------+----------+------------------+-------------+
```

Below is the result.

```
MariaDB [organization]> SELECT * FROM employees WHERE department != 'Information Technology';
+-------------+--------------+----------+-----------------+-------------+
| employee_id | device_id    | username | department      | office      |

Summary

This project demonstrates the basic day to day use of SQL as a cyber security analyst. I have shown that curating queries correctly by using SELECT, FROM, and WHERE will produce the desired outcomes for the analyst. SQL is the easiest and the fastest way to sift through huge amounts of data which it would just not be possible to do manually.
